

EDFIP system architecture

One hosted platform. Staff work in Odoo. Core banking is Fineract. The integration service posts money once.

Dexta Synergy Services · Confidential

CHANNELS

Nginx — TLS at the edge. Staff and the customer portal go to Odoo. Apps, USSD, partners, payments and OEM callbacks go to the integration service.

Staff and customer portal

Apps, USSD, partners, payments, OEM

Odoo — operating platform
System Administration, licences, module packs, CRM, KYC, customer record, home branch, account officer, VSLA, cooperatives, PayGo operations, agency float, staff screens and customer portal.
Does not post the ledger. When money must move, Odoo asks the integration service.

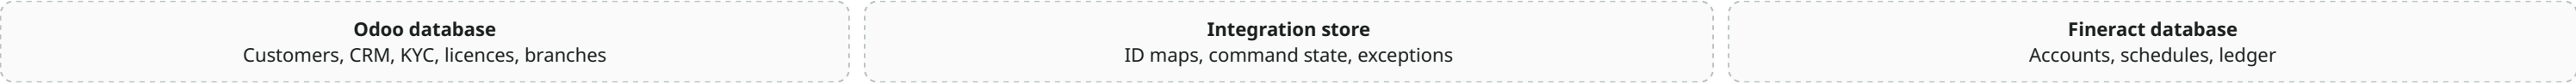

FastAPI — integration service
Same Emeraid environment as Odoo. Separate process. Maps Odoo IDs to Fineract IDs. Checks institution, branch and licence. Posts each financial instruction once. Webhooks, offline sync, receipts.
Not a bank. Does not write Odoo or Fineract tables. Does not sit in front of staff screens.

Money posts only through the integration service ↓

Apache Fineract — core banking
Loans, savings, schedules, balances, general ledger. Internal service — not a staff website. One ledger. Customer accounts live here; the person, branch and officer live in Odoo, linked by one customer number.

DATA STORES — SEPARATE. NO SHARED TABLES.

SHARED SERVICES

A customer belongs to one institution, one home branch and one account officer. Staff see their branch. The customer app shows only that person's accounts. Unlicensed modules are unavailable on screens and through the API.
